

## Description

Series 50HBM Deadlatches are lever tumbler, motor-operated locks for sliding doors, utilizing hookbolts. Specify keying as follows:
51 Keyed case side
52 Keyed cover side
56 Keyed both sides

## Applications

$\qquad$
Jamb-mounted 50HBM locks should be specified for maximum security cell, corridor, sallyport, or entrance/egress sliding doors. May be installed within a lock pocket or full height column. They are designed to be part of an electrical locking/unlocking system to provide institutional staff with maximum safety and flexibility of operation.

## Operations

All 50HBM locks are operated by electric motor. The choice of two motor operations provides a variety of functions:
Full-Rotation Motor (50HBM) with latchback (1):
Unlocks when the motor is energized by a momentary contact switch. Once unlocked, the hookbolt is held mechanically in the raised position until the door is opened. It then returns to normal, lowered position.
Two-Position Motor (50HBMC) without latchback (2):
Same as above, except that the hookbolt is raised and lowered as the motor runs. A door starter should be installed in the track housing to push the door open when the motor reaches the unlocking point.

## 50HBM DEADLATCH

## Testing

50HBM locks have been tested for over 1,000,000 operations.

## Standard Features

- Motor voltage - 120VAC
- External mounting - Locks install without cover plate removal. External slotted mounting holes simplify installation and allow for variations in door gap by permitting lateral movement.
- Two-piece plug connector Simplifies wiring at time of installation and allows pre-wiring at the lock pocket.
- Superior durability - Working parts are stainless steel and designed for maximum strength and corrosion resistance.

- Hardened hookbolt and deadlock actuator - Zinc plated for corrosion resistance.
- Motor operation - A choice of two operations is available, as shown on following page.
- High security - Choice of five or six lever tumbler models. Six tumbler model offers greater pick resistance.
- Mechanical unlocking by key Once unlocked by key, the hookbolt remains in that position until relocked by key (Models without latchback feature). Key is removable in the unlocked position.
- Indication switch - The indication switch monitors the deadlock lever to indicate a deadlocked hookbolt.
- Finish - Zinc plated.

## Optional Features

Motor voltage - 24VDC
Lock bolt keepers - Select 50H-4DB with dust box.

## Dimensional Data

Note: Dimensions are for information and planning purposes only and should not be used as templates.

Specifications

- Case - 7 and 10 gauge steel.
- Cover - 10 gauge HRS.
- Hookbolt - 5 inch steel, case hardened and zinc plated.
- Deadlock actuator - .5 inch square CRS, hardened and zinc plated.
- Deadlock and operator levers Stainless steel.
- Springs - Stainless steel.
- Motor - Synchronous-type gearmotor with brake.

## Electrical

Characteristics

- Motor (AC) - Synchronous-type gearmotor with brake.
Ratings: 120VAC, $60 \mathrm{HZ}, 1.3 \mathrm{amps}$ at full load.
- Motor (DC) - Permanent magnet gearmotor.
Ratings: 24VDC, 2.2 amps at full load.
- Indication switch - SPDT, UL Listed.
Deadlock Ratings: 15 amps at 125 or 250 VAC.
Auxiliary Ratings: 10 amps 125 or 250 VAC.

| MODEL NO. | OPERATION DESCRIPTION | LATCHBACK |  | OPERATION SWITCHES INTERLOCK | INDICATION SWITCH DEADLOCK |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | WITH | WITHOUT |  |  |
